### Description of Leeb Hardness Tester NOVOTEST T-D3:

Built-in camera allows to take a picture of tested object and mark tested area with corresponding hardness value.

User get the most reliable and intuitive method of logging of measurements.

Hardness tester has technical specifications that not inferior to the most eminent and expensive hardness tester of the world, with a much more extensive functionality!

The device works with dynamic (Leeb) probe. Dynamic (Leeb) probe is used for measuring the hardness of non-ferrous metals, cast iron, coarse-grained materials, massive products etc.

Device can be equipped with different types (D, DC, DL, C, D+15, E, G) of Leeb probe. Standard set of the device is included D type (universal) Leeb probe, other types by request.

Has different operating modes:

-  **Graph** - the mode of building of graph;
-  **Histogram** - the mode of building of histogram;
-  **Statistics** - the mode of statistic;
-  **Smart** - the mode of filtering of incorrect measurements;
-  **Signal** - the mode of displaying of signal.

Sealed housing with rubber protective strips - Hardness testers is ideal for use in workshop and field conditions with high humidity, dust, etc.

Hardness tester has frost-resistant display that allows user to use the device at any season and in any climatic zone of the Earth.
